CAREER OBJECTIVE

I am a graduate of Artificial Intelligence and Data Science with experience in machine learning and full-stack development using Python, FastAPI, React, PostgreSQL and Scikit-learn. I want to work as an Artificial Intelligence and Machine Learning Engineer or a Software Engineer where I can build solutions that're practical and reliable and based on data, from Artificial Intelligence and Machine Learning.

EDUCATION

B.Tech in Artificial Intelligence and Data Science R P Sarathy Institute of Technology, Salem CGPA: 7.9	2022 - 2026
Higher Secondary Education Morning Star Higher Secondary School, Gudalur Percentage: 82	2021 - 2022

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, SQL

Web Technologies: HTML5, CSS3, ReactJS, Redux Toolkit

Databases: MySQL, PostgreSQL

Backend: FastAPI, Spring Boot, REST APIs, SQLAlchemy

AI / Data: Artificial Intelligence, Machine Learning, Data Analysis, Data Visualization, Predictive Modeling, Classification, Model Evaluation, Federated Learning, Federated Optimization, Scikit-learn, Pandas, NumPy

Tools and Platforms: Git, GitHub, Jupyter Notebook, Docker, Playwright, AWS, Postman

PROJECTS

Decentralized Predictive Intelligence for Multi-Tenant Task Management Using Federated Optimization

(Python, FastAPI, Scikit-learn, React, PostgreSQL, Docker)

- Developed a multi-tenant task management platform using React, FastAPI, PostgreSQL, and Python, implementing tenant-level data isolation, JWT authentication, and role-based access control.
- Built a machine learning-based task-delay prediction system using Logistic Regression, Decision Tree, and Naive Bayes, achieving 76.92% accuracy with Logistic Regression.
- Implemented federated learning with local tenant model training and model-update aggregation, enabling collaborative predictive modelling without directly sharing raw tenant data. Integrated real-time prediction APIs into the backend to classify task delay risk and display predictive insights through the React dashboard..

Fashion E-Commerce Platform

(React, FastAPI, PostgreSQL, Docker, Razorpay)

- Developed a full-stack e-commerce platform for managing products, variants, inventory, orders, customers, and administrative operations.
- Implemented product variant management with size, colour, SKU, pricing, stock tracking, and publishing workflows.
- Integrated Razor pay payments, Firebase authentication, and Docker-based deployment for a complete e-commerce workflow.

Fitness Tracker

(Java, HTML, CSS, JavaScript, SQL)

- Built a web application for logging workouts, tracking calories, and monitoring fitness progress.
- Implemented Java and SQL-based data persistence for storing and managing workout records.
- Added JavaScript visualizations to present progress trends and provide fitness insights.

INTERNSHIPS

Full-Stack Developer Intern, Amphisoft Technologies

May 2024 - Jul 2024

- I worked with Java and Spring Boot to create and test REST APIs that handle data operations for applications.
- I used SQL queries. Performed database operations to get and manage application data.
- I got experience, with backend development integrating APIs and working through full-stack application processes.

Data Analytics Intern, Odugaa Tech

Jun 2023 - Aug 2023

- Analyzed datasets using Python and Power BI to create data visualizations and deliver actionable business insights.

CERTIFICATIONS

- Google Cloud Computing - Oracle Academy
- Cybersecurity Fundamentals - IBM SkillsBuild
- Python 101 for Data Science (PY0101EN) - IBM / Cognitive Class
